

**SUNS™** Body Scanner/Metal Detector is ideal for use at airports, industrial sites, government buildings, schools, hospitals, conferences, sport events, or anywhere you need security. It's sensitive enough to detect metal objects the size of a 25-cent piece. It sounds a high-pitched tone whenever it detects metal - a longer tone for larger objects, and a shorter one for smaller objects. You can use rechargeable nickel-cadmium battery for power, and recharge it in the Body Scanner.

- 1) Red LED Indicator lights when the Body Scanner detects metal.
- 2) De-Sense Button reduces the Body Scanner sensitivity by about 50 percent, so you scan near floors, which contain large amounts of steel reinforcement, or only for larger objects.
- 3) Earphone Jack lets you connect an optional earphone to the Body Scanner so you can scan with privacy.

|                         |                         |                                  |
|-------------------------|-------------------------|----------------------------------|
| Construction Material   |                         | High quality ABS plastic         |
| Sensitivity             | A 25-cent coin          | 60mm ( 15mm )*                   |
|                         | Iron pipe-tube in Ø20mm | 100mm (30mm )*                   |
| Sensitivity Adjustment  |                         | Yes, Continuous                  |
| Temperature environment |                         | -10°C ~ 50°C                     |
| Operating current       |                         | <8mA                             |
| Weight                  |                         | 450g (including battery)         |
| Dimension               |                         | 420 X80 X40mm                    |
